The pages will become shorter as we sell out of certain parts. I will try to keep them as up to date as I have time to do so. We are out of the rechrome plastic business. The vacuum metallizing company that was doing our work has down sized and moving that portion of their business out of state. That would make the shipping a very large hassle and way to expensive for us to be the middle man. We regret the inconvenience this will cause our long time customers.

I thank all of you for your understanding and patience in our indever to help you keep your cars looking nice. We will continue to supply our fastener and screw kits and bolt kits. We are not going away just refocusing on what we can do to service our customers.

Thank you very much.

Glenn Garrison

Do you know
what this fits?
Let me know
Please.

A couple of slats have uncoated spots on back edge. Viewable only if you shut the slats. That happend since the slats were closed during chroming. There is a repair on the right upper wall as shown in the picture.

This is a Underdash Repaired and Rechromed A/C Face unknown make and model. It includes working slats and knobs \$ 39.00
